

D. Guerrilla Usability Testing

Name	Feedback	Actionable	Response
Rachel M.	Text looks squished on the bars and there is a lot of free space. Move text further away from the picture box.	Actionable	I will adjust the text on the CSS grid to be further away from the image. I will also adjust spacing between the bars to make it more uniform, filling any gaps. This will help make the website easier to view and when using responsiveness – it will allow additional room for the text to move in the grid.
Cassidy R.	Navigation bar needs to always be displayed without having to scroll everywhere to get to it.	Actionable	I will make the top navigation bar static and responsive so that it displays wherever the user is to allow easy navigation and more likely to visit the site or recommend it to family and friends in the future. In addition, mobile users will be able to access the menu from their phones and will not have to scroll.
Jacob P.	The button on the home page should have a pop-up instead of having the book now form.	Actionable	I will eliminate the Book Now form page and create a pop-up, which will make it easier for users to get back to the main site without having to visit a random page that has no other mention on the website.
